## Deep Energy Retrofits with Beyond Green, Off Grid Condos

[CLICK HERE TO DOWNLOAD PLAN SET \(pdf file\)](#)

This condo project will be a renovation of an early 1900's 2-Family dwelling. It will be executed with as little fossil fuels and as many green products as possible. Things like environmentally friendly paints and stains to solar heating and electricity. We are very excited to show homeowners & developers that there really are ways we can make a difference in our consumption of fossil fuels and our impact on the planet.

### Green Features of "Off Grid Condos"

- Insulated Concrete Form Construction
- Building Integrated Photovoltaic Systems for Electricity Production
- Evacuated Solar Tubes for Hot Water Production
- 12,000 gal Underground Cistern for Rainwater Collection
- Edible Landscape
- FSC Certified Lumber
- Recyclable Metal Roofing that Lasts Longer and Reduces Cooling Expense
- Renewable and /or Recycled Materials
- Environmentally Friendly Paints and Stains
- Pellet Stove for Back up Heat

- Registered with the United States Green Building Council for LEED Certification @ the Platinum Level
